

Arnab Goswami

Senior Statistical Programmer II,
Bangalore, India.

Arnab's chosen career path

**Mar 2019 – Senior
Statistical Programmer II
- Ophthalmology**

Planned career steps

Principal Programmer

Associate Manager

Arnab started his career in drug discovery in R&D labs, having studied for an MSC in Microbiology. After graduation, he worked in Bose Research Institute for over a year, and then moved from wet labs to work on data programming in CROs. Over 13 years he has built his experience in Oncology, Respiratory, Neurologic, Metabolic and Vaccines, as well as gaining team management skills, mentoring and public speaking.

Arnab had heard from many of his contacts and colleagues that ICON is in the forefront of clinical research. He had also interacted with ICON people and got a positive impression. He joined the DOCS team at ICON in March 2019 as a Senior Statistical Programmer II and has been impressed with what he has seen.

Arnab is the lead programmer on an observational Ophthalmology trial and he supports two other trials, all focused on surgical devices. His colleagues on the trials are primarily based in India, Armenia and USA. He is already been recognised by an internal Inspire award for 'exceptional contribution in accountability and delivery' by his manager.

“When I decided to join ICON I was excited about joining such a prestigious organisation, the clear leader in clinical research. And the reality is even better than I had hoped, I find my work challenging and I’m learning so much. Working directly in my client’s business gives me clear responsibility and exposure to all sorts of challenges. I am proud that I have been recognised by my manager for thinking on my feet and finding solutions.

On top of my day job, I am presenting at ConSPIC and PhUSE on personalised medicine, real-world evidence and AI. I really appreciate this opportunity.

ICON is a great company to build my career in, my colleagues are really friendly and we have time for socialising with great work-life balance, flexibility and support from our managers. ”
